

Crankcase VENTILATION HOSES

NEW ASSORTMENT!

The crankcase ventilation hose is one of the main components of the crankcase ventilation system, next to the oil separator. Gases leaking from the combustion chamber increase the pressure in the crankcase, therefore it is necessary to deaerate the crankcase for the correct work of the engine. The accumulated gases are directed back to the cylinders through these ventilation hoses. Blockage or damage of the hose can lead to oil leaks and damage to the engine, so it is important to check crankcase ventilation hoses condition and replacing it with a new one when necessary.

Polcar offers **high-quality crankcase ventilation hoses**, which thanks to multi-material technology **ensure high resistance to:**

- ▶ **mechanical damage,**
- ▶ **chemical substances (including oils),**
- ▶ **overheating.**

Hoses are passing the detailed quality control during which tests are performed to verify:

- ☒ tightness,
- ☒ resistance to extreme temperatures,
- ☒ high pressure resistance.

Please check also the offer of over 90 references of **oil separators**. The available separators are characterized by high precision, provide excellent tightness, mechanical strength, and thermal and chemical resistance.

Oil separators are available in the eCar catalog in the Wear Parts -> Engine -> Engine block -> Oil separator and in the online catalog at <https://catalog.polcar.com>
